and tubing sets

55.6M
wound protection
sleeves

13.9M
gowns

12.7M
hypodermic needle
syringes and needles

11.5M
surgical instruments

15.6M
other devices

Operating Safely

- Committed to outperforming applicable environmental, health and safety regulations and consistently operate in full compliance with our existing EPD permit
- Voluntarily installed enhancements to our emission control systems in 2019 despite already operating safely and in full compliance with our EPD permit and applicable regulations
- Third-party tests verified the effectiveness of our enhancements, demonstrating that our emissions controls perform significantly better than the total ethylene oxide removal requirements established by EPD
- New permit related to facility enhancements currently pending EPD approval

We are operating the most advanced emission controls at any sterilization facility anywhere in the world. Our facility is safe for workers at the facility and for the surrounding community
