suction tubing and tubing sets

**18.5M**

tongue depressors

**13.8M**

gowns

**11.9M**

hypodermic needle syringes and needles

**7.5M**

surgical instruments

## Operating Safely

- Voluntarily installed enhancements to our emission control systems in 2019 despite already operating safely and in full compliance with our Georgia EPD permit and applicable regulations
- In January 2020, the Georgia EPD completed the permit process related to the emissions control enhancements
- The new permit reflects some of the most stringent controls in the world and follows months of review, including GA EPD inspections and third-party tests that verified the effectiveness of the additional state-of-the-art emissions control enhancements
- Sterigenics is committed to complying with these stringent new requirements while continuing to safely perform its vital work to meet the demands of our nation's healthcare system
- Since safely reopening in April 2020, Sterigenics Atlanta has sterilized more than 590 million medical products and devices

**We are operating the most advanced emission controls at any sterilization facility anywhere in the world. Our facility is safe for workers at the facility and for the surrounding community.**
