Statement Regarding Atlanta Facility Permit Issuance

“On January 6 the Georgia Environmental Protection Department (GA EPD) completed the permit process related to the emissions control enhancements made at the Sterigenics Atlanta facility. The new permit reflects some of the most stringent controls in the world and follows months of review, including GA EPD inspections and third-party tests that verified the effectiveness of the additional state-of-the-art emissions control enhancements that Sterigenics voluntarily installed. The permit requirements include negative pressure capture and control systems for fugitive emissions and continuous emissions monitoring. Sterigenics is committed to complying with these stringent new requirements while continuing to safely perform its vital work to meet the demands of our nation’s healthcare system.”
